# VISIONWARE

V-LIGHT® FLIPPER™

# GRADING & WEIGHING MADE EASY

Groundbreaking innovation designed to transform the way you sort and count live poultry birds by their weight. With the ability to categorise/“FLIP” birds into three different weight ranges. The Flipper scale redefines poultry weight management.

- **EASILY WEIGH/GRADE 900 BIRDS PER HOUR**

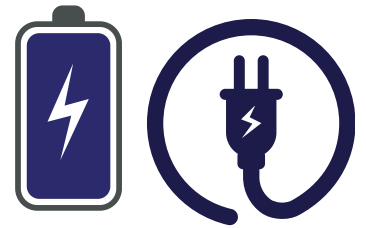

The actual number of birds graded per hour will depend on loading speed. (4 seconds loading time = 900 birds per hour)

- **REDUCE ERRORS AND MANUAL LABOUR**

## FULLY ELECTRIC WITH BACKUP BATTERY SYSTEM

The Flipper stands out with its innovative mechanical sorting mechanism, which operates entirely without an air compressor. This is a major advantage over traditional pneumatic systems. This design ensures simpler maintenance, greater energy efficiency, and lower operating costs.

The unit is electrically powered (100VAC-230VAC), with an optional battery backup available to support full-day operation during power interruptions, ensuring productivity even in challenging environments.

## 3-WAY GRADING

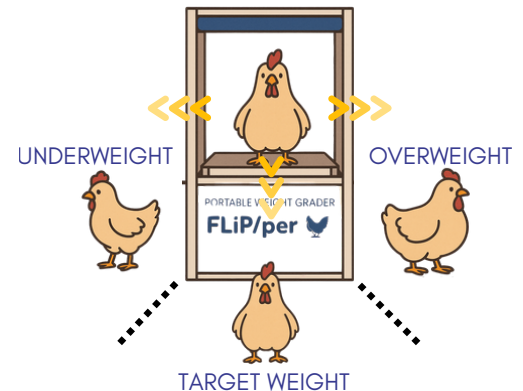

A 3-way automatic grader is essential for modern poultry operations aiming for precision, profitability, and performance. It's not just about sorting birds, it's about smarter flock management and better production results.

### ACCURATE WEIGHT-BASED SORTING:

Sorts live birds into three distinct categories that enables targeted feeding and management for each group.

- **Left: Underweight**
- **Centre: Target weight**
- **Right: Overweight**

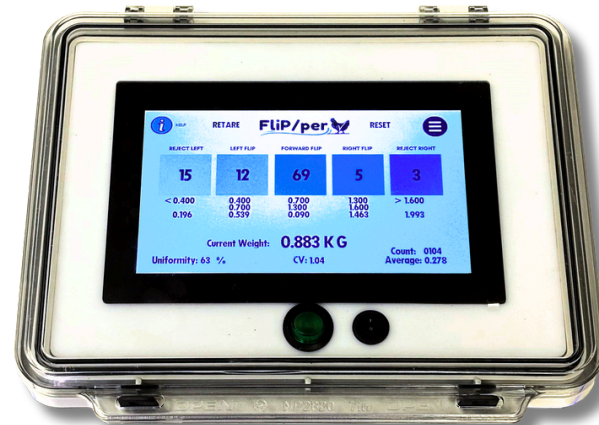

### 3 WAY FUNCTION

## SMART INTERFACE DISPLAY

The Flipper is equipped with a user-friendly touchscreen display designed for simplicity and control. Its intuitive interface allows for quick setup, real-time monitoring, and easy operation, even by first-time users.

- Customisable settings for different flock weight profiles.
- Real-time average body weight / uniformity data.
- Built-in data storage for all recorded weights.
- Data export capability via USB
